RE: Fairing Installation

Whenever any type of fairing, including the new Avon AV-70/1, is installed on an R 50/5, R 60/5, and R 75/5, it is necessary to install two spacers part No. 31 42 2 000 399 under each front fork spring. These spacers will compensate for the additional weight placed over the front fork. Through the addition of these spacers, the trail (castor) is maintained at the required 85mm with the fairing installed.
