## RE: IDENTIFYING TERMINALS ON IGNITION CONTROL UNIT

Dear Dealer:

On the ignition control units for motorcycles with TSZh ignition (transistorized coil ignition with Hall-effect trigger), the terminals are numbered in sequence from 1 to 7. In the circuit diagrams, the standardized terminal identification numbers appear in some cases.

The drawing below shows how the two methods of identification are related.

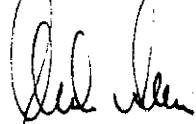

The drawing shows:

- the numerical code for the control unit terminals
- the standard terminal designations
- the component supplied from the terminal.

Terminal designations are the same on all control units.

Yours truly,

BMW OF NORTH AMERICA, INC.
